

*signal component of the SoHo cycle is the evolution of work/live spaces to live/work or even home occupation.* Buildings evolve over time, as do neighborhoods. There are winners and losers here, and as stated above, such cycles repeat themselves in successive locations.

Thomas Dolan is an architect, urban designer and live-work code and development consultant who built the first new construction live-work in US, starting in 1987. In that project, South Prescott Village in Oakland, California, Thomas Dolan Architecture invented a new building type, the live-work courtyard community. Tom's book, [Live-Work Planning and Design: Zero Commute Housing](#), is the first comprehensive treatment of live-work. More information about live-work and his firm can be found on [the live-work blog](#) on this site, and at <http://www.live-work.com>.
